

Diamana

DIAMANA™ PUTTER

Iconic Diamana™ Feel in Your Putter

24-Ton Modulus Carbon Fiber + 6K Woven Fabric

Low Resin Percentage to Maximize Carbon Content

Full Length Carbon Fiber Plies for Super Smooth EI Profile

Mitsubishi Chemical America

DIAMANA™ PUTTER

The iconic smooth Diamana™ feel is now available in your putter. Diamana™ Putter shafts promote super smooth and responsive feel and create a truer roll off the putter face. The Diamana™ Putter series features two different flex versions – 1.0 is softer and 2.0 is substantially firmer – and both help speed control and start line on the greens.

For fitters it's important to note while 2.0 is only available in 135g, it is over 100 CPM stiffer than the 1.0 profile and, alternatively, for those selecting a 1.0 version, the flex profiles are the same for both the 105g and 135g weights.

Made with 24-ton and high strength Intermediate modulus carbon fiber — along with a visible, external 6K woven fabric applied on a bias for a low torque rating — Diamana™ Putter also features premier grade carbon fiber with a low resin percentage to maximize carbon content and enhance feel. Additionally, carbon fiber plies in internal layers running the full length of the shaft create a super smooth EI for improved feedback.

Player Profile: Diamana™ Putter is perfect for any player who loves the iconic smooth feel and brand consistency of Diamana shafts throughout the bag.

DIAMANA™ PUTTER FEATURES

✓ SUPERIOR CONSISTENCY VS. STEEL ✓ AVAILABLE IN BOTH 1.0 & 2.0 FLEX PROFILES

DIAMANA™ PUTTER CONCEPT SPECS
