

DIAMANA™ STINGER

MID PROFILE PERFORMANCE

NEW Legendary Boron Construction Returns

Full Length Boron Fiber + DIALEAD™ High Modulus Pitch Carbon Fiber

Tour Prototype Heritage Construction

Small Batch Production Made in Japan

Mitsubishi Chemical America

DIAMANA™ STINGER

The return of one of the most legendary prototypes in Diamana history. Originally developed as a Tour prototype, Diamana Stinger earned a reputation among elite players for its exceptional stability, powerful feel, and uncompromising construction.

The 2026 Diamana Stinger continues that legacy while incorporating modern composite technologies developed through more than two decades of Diamana innovation. Manufactured in Japan by Mitsubishi Chemical in small-batch production, Stinger features full-length boron fiber construction combined with DIALEAD high modulus pitch carbon fiber to create a structure that delivers remarkable stability, efficient energy transfer, and powerful impact feedback.

Built on a mid-profile platform inspired by the classic Diamana Blue Board lineage, Stinger delivers increased tip stability and tighter dispersion for players with aggressive transitions and higher swing speeds. The result is a shaft engineered for exceptional control, strong ball flight, and the unmistakable feel that defines Diamana.

Player Profile: Diamana Stinger is designed for stronger players seeking maximum stability and control. The reinforced tip structure and premium composite construction provide the stability required for aggressive transitions while maintaining the smooth feel expected from the Diamana family. Ideal for players who demand precision, consistency, and powerful feedback from their driver shaft.

DIAMANA™ STINGER

- ✓ FULL LENGTH BORON CONSTRUCTION
- ✓ DIALEAD™ HIGH MODULUS PITCH CARBON FIBER
- ✓ TOUR PROTOTYPE HERITAGE
- ✓ SMALL BATCH JAPAN PRODUCTION
